

Arsenal® Herbicide

FOR NEW USE IN PASTURE AND RANGELAND

Q&A

Q: Can Arsenal® herbicide be used on pasture and rangeland?

A: Yes, **Arsenal** can be used for spot treatment on grass pasture and rangeland, and in non-cropland areas including areas that may be grazed or cut for hay.

Q: What vegetation does Arsenal control?

A: **Arsenal** will control most annual and perennial grasses and broadleaf weeds in addition to many brush and vine species. **Arsenal** will provide residual control of labeled weeds which germinate in the treated areas.

Q: How should Arsenal be applied on these lands?

A: For the control of undesirable weeds in pasture and rangeland, **Arsenal** may be applied as a spot treatment at a rate of 2 to 48 fluid ounces of product per treated acre, using ground application methods as described on the label. Spot applications to grass pasture and rangeland may not exceed more than one tenth of the area to be grazed or cut for hay. DO NOT apply more than 48 fluid ounces per acre per year. See appropriate sections of the label for specific use directions.

Q: When should I apply Arsenal?

A: **Arsenal** should only be applied as a spot or limited broadcast application, where no more than one tenth of the available area to be grazed or cut for hay is treated.

When applied to desirable forage grasses, **Arsenal** will cause severe injury, growth reduction and grass mortality. Care should be taken to only apply **Arsenal** where this type of forage grass injury can be tolerated. The use of low volume, directed applications, targeting the undesirable vegetation can minimize the impact on desirable forage grasses. See appropriate sections of the label for specific use directions for the desired vegetation control.

This product may be applied either preemergence or postemergence to the weeds; however, postemergence application is the method of choice in most situations, particularly for perennial species.

For maximum activity, weeds should be growing vigorously at the time of postemergence application and the spray solution should include a surfactant. (See Adjuvant Section of label for specific recommendations).

Arsenal® Herbicide

FOR NEW USE IN PASTURE AND RANGELAND

Q: Are there grazing or haying restrictions with Arsenal?

A: There are no grazing restrictions with **Arsenal**. Do not cut forage grass for hay until seven days after **Arsenal** treatment.

Q: How can I protect threatened or endangered plant species when applying Arsenal?

A: To ensure the protection of threatened and endangered plants when applying **Arsenal** to rangeland:

1) Federal agencies must follow NEPA regulations to ensure protection of threatened and endangered plants.

2) State agencies must work with the Fish and Wildlife Service or the Service's designated state conservation agency to ensure protection of threatened and endangered plants.

3) Other organizations or individuals must operate under a Habitat Conservation Plan if threatened or endangered plants are known to be present on the land to be treated.
